DETAILED ACTION

Claims

1. Claims 1-28 are pending.

Allowable Subject Matter

2. Claims 1-9 are allowed.
3. The prior art of record fails to teach or suggest inflatable balloons for medical use that have all of the features of claim 1.

Election/Restrictions

4. This application contains claims 21-28 drawn to an invention nonelected by virtue of an action having made on originally presented claims 1-9. See the discussion in section 4 of the 30 December 2002 office action (Paper No. 16).
5. The restriction requirement is proper, is maintained and is made final. Its propriety is chiefly based on the fact that the structural features of claims 1-20 are not recited in claims 21-38. Thus, a reference for claims 21+ would not necessarily be applicable to claims 1-20. See claim 6 of Joseph (cited in section 15 below), which does not call for node and fibril microstructure.
6. A complete reply to this final requirement must include cancellation of the nonelected claims or other appropriate action (37 CFR 1.144). See MPEP § 821.01.

Specification

7. The abstract of the disclosure is objected to for being too long. Under current PTO guidelines, an abstract should contain 150 words or less.

Correction is required. See MPEP § 608.01(b).

Priority

8. If applicant desires priority under 35 U.S.C. 120 based upon a previously filed application, specific reference to the earlier filed application must be made in the instant application. For benefit claims under 35 U.S.C. 120, 121 or 365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of the applications. This should appear as the first sentence of the specification following the title, preferably as a separate paragraph unless it appears in an application data sheet. The status of nonprovisional parent application(s) (whether patented or abandoned) should also be included. If a parent application has become a patent, the expression "now Patent No. ____" should follow the filing date of the parent application. If a parent application has become abandoned, the expression "now abandoned" should follow its filing date.

9. The current status of each of SNs. 08/247,960 and 08/204,708—i.e., the US patent numbers therefor—should be included at page 1 of the specification.

Rejection Withdrawn

10. The double patenting rejection of claims 1-20, per section 6 of Paper No. 16, is withdrawn in view of the Terminal Disclaimer filed on 29 May 2003 (Paper No. 18).

New Rejections

Claim Rejections - 35 USC § 112

11. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 1772

12. Claims 10-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The phrase "the tube being non-porous" is new matter because it is not supported by the specification as originally filed.

Please point out where support can be found for the quoted language or delete it from the claims.

13. Claims 10-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification does not describe the preparation and/or use of inflatable balloons for medical use comprising a nonporous tube with a node and fibril microstructure.

Response to Arguments

14. Any arguments presented earlier with respect to claims 10-20 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 1772

Citations of Interest

15. Joseph (US 4,902,292) teaches, in claim 6, a medical device containing an inflatable balloon made of porous expanded polytetrafluoroethylene (PTFE).
16. Delia Cornia et al (US 4,955,899) teaches a porous PTFE tube for medical use having a coating of nonporous polymer on its outer surface.
